DETAILED ACTION

1. This action is responsive to Applicants' Amendment filed 25 January 2008.
2. Claims 1-8, 16 and 17 are pending in this application. In the Amendment filed 25 January 2008, claims 9-15 and 18-23 are cancelled.
3. After a thorough search and examination of the present application and in light of the prior art made of record and Applicants' Amendments and Remarks filed 25 January 2008, claims 1-8, 16 and 17 (renumbered as 1-10) are allowed.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

In the Examiner's Office Action for Non-Final Rejection dated 23 October 2007, claims 1-8, 16 and 17 were rejected under 35 USC 103 based primarily on US PGPub 2006/0089924 to Raskutti et al and US Patent No 5,867,799 to Lang et al.

In the remarks filed 25 January 2008, in response to an Office Action dated 23 October 2007, Applicant distinguished the cited prior art, (Raskutti et al., US PGPub 2006/0089924; and Lang et al., US Patent No 5,867,799) by stating on pages 12-3 of the Remarks dated 25 January 2008, "One of the steps of creating each sub-filter is calculating a score threshold for the set of features from the second subset of training documents. ... As stated, the disclosure of paragraph [0075] describes determining a numerical score for a message. This is very different from the threshold score of claim 1 which is a bar value that allows documents which score above the threshold value to be accepted and those that score below the threshold value to be rejected." After consideration of these arguments

and further searching of the prior art, the arguments provided are persuasive.

Also, after careful consideration of the prior art of record and further searching for prior art, it is noted that the prior art fails to fairly teach or suggest the claimed subject matter **in which documents are filtered effectively and simultaneously by dividing the documents into subsets such that profile features of one subset are extracted to calculate the threshold of document selection criteria for the same profile features of another subset of documents, which is very distinct from a conventional method of extracting profile features from a document (or document subset) and then calculating threshold of document selection criteria by applying the calculation to exactly the same document (or document subset). The above described subject matter is expressed in the limitation language** of "wherein creating each sub-filter comprises the steps of selecting a first subset and a second subset from a set of training documents, extracting a set of features from the first subset, and calculating a score threshold from the set of features from the second subset" in the manner disclosed in each of the independent claims.

A thorough search for prior art in the EAST database and on domains (NPL-ACM, NPL-IEEE and Google.com) has been conducted. The prior art searched and investigated in the database and domains does not fairly teach or suggest the claimed subject matter as described above and reflected by the combined elements in each of the independent claims 1 and 8.

The dependent claims 2-7, 16 and 17 depending on independent claims 1 and 8, respectively are also distinct from the prior art for the same reasons.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
